

# Personal Project Proposal

Nathaniel Flores

September 2nd, 2020

Global Context: Scientific and technical innovation. How can I make computing simpler for the general public?

Criterion:

1. The operating system will be able to take input from a computer.
2. The operating system will contain at least 300 lines of code.
3. The operating system will print text to the screen.
4. The operating system will run on 32-bit computers.
5. The operating system will map memory.
6. The operating system will either come with a bootloader or use GRUB.
7. The operating system will have detailed comments explaining what is happening.
